BACKGROUND

Beginning in 1975, the Montana Wheat Research and Marketing Committee began funding a grain traffic statistics program in the Montana Department of Agriculture.

Since the program became operational in January of 1976, it has become one of the most sophisticated grain tracking systems in the United States. The data that has been generated by the Grain Movement Report has been used in numerous rate procedings before the Interstate Commerce Commission (pre Staggers Rail Act of 1980). More recently grain movement information was provided to the attorneys representing the grain growers in the McCarty Farms case. The grain movement information provided was a major deciding factor in the initial decision by the administrative law judge on December 14, 1981.

INTRODUCTION TO REPORT

The information contained in the following pages is intended to provide data regarding Montana's wheat and barley shipments for calendar years, 1979, 1980, and 1981.

This statistical report begins with calendar year 1979, with grain shipments by grain type to 15 destinations which include intrastate traffic. Following this, movement for each grain type has been placed on a matrix illustrating volumes to all destinations by transportation mode and the

percentage moved by each mode.

In the third section of the report for each year, the report examines, by grain type, the crop reporting district of origin and the volume moved to various destinations. (A map of the state's crop reporting districts' boundries can be found on page 3 of this report.)

The last section of each year's report breaks out each grain type and pinpoints the shipment from each crop reporting district to all destinations.

The format for each of the subsequent years is the same as previously described.

The following items are mentioned for the purposes of interpreting the data contained in the foregoing pages and other notations contained herein:

1. Truck movements of wheat destined for points in Interior Oregon and Washington are 95% points located on the Columbia River System bound for export through Portland.

2. Wheat destined to Idaho is river traffic bound for export through Portland and being loaded on barges through Lewiston, Idaho and Clarkston, Washington.

3. Intrastate movements of wheat by truck is predominately moving from areas where higher rail freight rates exsist and wheat can be trucked to an elevator elsewhere with lower freight rates and still save money compared to the elevator located nearer the point of production. The scenario is particularily true for traffic in the section for 1981 as unit train freight rates for wheat and barley were established in December, 1980.

If there any questions regarding this report or its contents, please direct them to:
